

## Using the TO\_CHAR Function with Dates

The format model:

```
TO_CHAR(date, 'format_model')
```

4-1

### Using the TO\_CHAR Function with Dates

TO\_CHAR converts a datetime data type to a value of VARCHAR2 data type in the format specified by the *format\_model*. A format model is a character literal that describes the format of datetime stored in a character string. For example, the datetime format model for the string '11-Nov-1999' is 'DD-Mon-YYYY'. You can use the TO\_CHAR function to convert a date from its default format to the one that you specify.

#### Guidelines

The format model must be enclosed with single quotation marks and is case-sensitive.

The format model can include any valid date format element. But be sure to separate the date value from the format model with a comma.

The names of days and months in the output are automatically padded with blanks.

To remove padded blanks or to suppress leading zeros, use the fill mode *fm* element.

```
SELECT employee_id, TO_CHAR(hire_date, 'MM/YY')
       Month_Hired
FROM   employees
WHERE  last_name = 'Higgins';
```

	EMPLOYEE_ID	MONTH_HIRED
1	205	06/94

## Elements of the Date Format Model

Element	Result
YYYY	Full year in numbers
YEAR	Year spelled out (in English)
MM	Two-digit value for the month
MONTH	Full name of the month
MON	Three-letter abbreviation of the month
DY	Three-letter abbreviation of the day of the week
DAY	Full name of the day of the week
DD	Numeric day of the month

## Sample Format Elements of Valid Date Formats

Element	Description
SCC or CC	Century; server prefixes B.C. date with -
Years in dates YYYY or SYYYY	Year; server prefixes B.C. date with -
YYY or YY or Y	Last three, two, or one digit of the year
Y,YYY	Year with comma in this position
IYYY, IYY, IY, I	Four-, three-, two-, or one-digit year based on the ISO standard
SYEAR or YEAR	Year spelled out; server prefixes B.C. date with -
BC or AD	Indicates B.C. or A.D. year
B.C. or A.D.	Indicates B.C. or A.D. year using periods
Q	Quarter of year
MM	Month: two-digit value
MONTH	Name of the month padded with blanks to a length of nine characters
MON	Name of the month, three-letter abbreviation
RM	Roman numeral month
WW or W	Week of the year or month
DDD or DD or D	Day of the year, month, or week
DAY	Name of the day padded with blanks to a length of nine characters
DY	Name of the day; three-letter abbreviation
J	Julian day; the number of days since December 31, 4713 B.C.
IW	Weeks in the year from ISO standard (1 to 53)

## Elements of the Date Format Model

- Time elements format the time portion of the date:

HH24:MI:SS AM	15:45:32 PM
---------------	-------------

- Add character strings by enclosing them with double quotation marks:

DD "of" MONTH	12 of OCTOBER
---------------	---------------

- Number suffixes spell out numbers:

ddspth	fourteenth
--------	------------

4-4

## Elements of the Date Format Model

Use the formats that are listed in the following tables to display time information and literals, and to change numerals to spelled numbers.

Element	Description
AM or PM	Meridian indicator
A.M. or P.M.	Meridian indicator with periods
HH or HH12 or HH24	Hour of day, or hour (1–12), or hour (0–23)
MI	Minute (0–59)
SS	Second (0–59)
SSSSS	Seconds past midnight (0–86399)

Elements of the Date Format Model (continued)

Other Formats

Element	Description
/ . ,	Punctuation is reproduced in the result.
“of to”	Quoted characters are reproduced in the result.

Specifying Suffixes to Influence Number Display

Element	Description
TH	Ordinal number (for example, DDTH for 4TH)
SP	Spelled-out number (for example, DDSP for FOUR)
SPTH or THSP	Spelled-out ordinal numbers (for example, DDSPTH for FOURTH)

## Using the TO\_CHAR Function with Dates

```
SELECT order_id, to_char(order_date, 'fmDD Month YYYY')
AS "Date of Order"
FROM orders;
```

ORDER_ID	Date of Order
1	17 August 1999
2	20 November 1999
3	3 October 1999
4	15 July 2000
5	9 January 2000
6	15 May 2000
7	1 September 1999
8	9 January 1998
9	11 February 2000
10	3 September 1999

\*\*\*

4.6

## Using the TO\_CHAR Function with Dates

The SQL statement in the slide displays the order ID's and Date of order for all the orders. The order date appears as 17 June 1987.

### Example:

Modify the example in the slide to display the dates in a format that appears as "Seventeenth of June 1987 12:00:00 AM."

```
SELECT order_id,
TO_CHAR(order_date,
'fmDdsph "of" Month YYYY fmHH:MI:SS AM')
AS "Date of Order"
FROM orders;
```

No	LAST_NAME	HIREDATE
1	Whalen	Seventeenth of September 1987 12:00:00 AM
2	Hartstein	Seventeenth of February 1996 12:00:00 AM

\*\*\*

## Using the TO\_CHAR Function with Numbers

```
TO_CHAR(number, 'format_model')
```

These are some of the format elements that you can use with the TO\_CHAR function to display a number value as a character:

Element	Result
9	Represents a number
0	Forces a zero to be displayed
\$	Places a floating dollar sign
L	Uses the floating local currency symbol
.	Prints a decimal point
,	Prints a comma as a thousands indicator

4.7

### Using the TO\_CHAR Function with Numbers

When working with number values, such as character strings, you should convert those numbers to the character data type using the TO\_CHAR function, which translates a value of NUMBER data type to VARCHAR2 data type. This technique is especially useful with concatenation.

## Using the TO\_CHAR Function with Numbers (continued)

### Number Format Elements

If you are converting a number to the character data type, you can use the following format elements:

Element	Description	Example	Result
9	Numeric position (number of 9s determine display width)	999999	1234
0	Display leading zeros	099999	001234
\$	Floating dollar sign	\$999999	\$1234
L	Floating local currency symbol	L999999	FF1234
D	Returns the decimal character in the specified position. The default is a period (.).	99D99	99.99
.	Decimal point in position specified	999999.99	1234.00
G	Returns the group separator in the specified position. You can specify multiple group separators in a number format model.	9,999	9G999
,	Comma in position specified	999,999	1,234
MI	Minus signs to right (negative values)	999999MI	1234-
PR	Parentthesize negative numbers	999999PR	<1234>
EEEE	Scientific notation (format must specify four Es)	99.999EEEE	1.234E+03
U	Returns in the specified position the “Euro” (or other) dual currency	U9999	€1234
V	Multiply by 10 <i>n</i> times ( <i>n</i> = number of 9s after V)	9999V99	123400
S	Returns the negative or positive value	S9999	-1234 or +1234
B	Display zero values as blank, not 0	B9999.99	1234.00

## Using the TO\_CHAR Function with Numbers

```
SELECT TO_CHAR(salary, '$99,999.00') SALARY  
FROM   employees  
WHERE  last_name = 'Ernst';
```

	SALARY
1	\$6,000.00

49

### Using the TO\_CHAR Function with Numbers (continued)

The Oracle server displays a string of number signs (#) in place of a whole number whose digits exceed the number of digits provided in the format model.

The Oracle server rounds the stored decimal value to the number of decimal places provided in the format model.
